

WELCOMING PATIENTS TO USE MYLINKS

MyLinks Product Guide

Rev. September 2020

MyLinks 
Linking Us Together for Better Care

HOW MYLINKS CAN HELP YOU!

CMS has new measures that require providers to allow patients access to their health information using any application of their choice (as long as the application meets the technical guidelines of your EHR).

The measure also states that providers are expected to provide patients with information about available applications. We have good news! Not only can MyLinks be used to meet the CMS measure, but we are providing information you can share with your patients **all for free!**

Description: MyLinks® is a patient-facing application which allows your patients to download their health records from all their doctors and store them in one secure location for easy access and sharing.

Focus: We're pleased to offer you a product guide with easy access to a variety of resources! Whether you are informing patients on how to use MyLinks or you want to understand more about the laws and benefits of patient access to their health data, we have something for you!

Resources:

PATIENT MATERIALS

MyLinks Information Kit for a Patient:
(Click to download PDF)

*If you don't see your clinic listed in MyLinks, download our Patient Provider Letter to give to your doctor to get the conversation started.
